

A new partnership is alive!

The Dutch PSD2 certified fintech Bizcuit and the Microsoft Dynamics 365 Business Central ISV OPplus (gbedv) just launched a new interface for processing all payment relevant data (bank statements, payments etc.) automatically and fully cloud based!

There is great demand for Open API based interfaces to PSD2 certified payment providers!

We are very pleased to be able to connect another payment service provider to **OPplus** in addition to our already very successful cooperation with another payment provider.

Within the scope of a young and very promising partnership, we have developed an interface with the rapidly growing Fintech -Disruptor **Bizcuit B.V.** from the Netherlands in a very short time, which completely covers the digital **B2B payment transactions** with **OPplus** in **Microsoft Dynamics 365 Business Central** and the **Bizcuit App**, of course entirely **SAAS** driven.

Thus we now close the gap in the digital automatic processing of bank transactions between Microsoft Dynamics 365 Business Central and the banks in the Netherlands.

Bizcuit B.V. is one of the first **PSD2** certified companies in the Netherlands to offer cloud-based payment services.

We are convinced that by partnering with **Bizcuit B.V.** as a **PSD2** full-service provider, we can offer our customers and partners another decisive added value in the deployment and placement of **Microsoft Dynamics 365 Business Central**. We expect this interface to be a great success in the European market.

Contact us if you are interested and are currently facing the question whether and how you can connect your Microsoft Dynamics 365 Business Central application to a payment service provider.
